ALTERNATIVE E
SHADY BEACH FIRE RECOVERY PROJECT
WILLAMETTE NATIONAL FOREST
1988/89

ALTERNATIVE E (No Action)

No timber harvest would occur with the exception of the removal of trees that could pose a safety hazard to users of Forest roads and facilities. Recovery of previously unmanaged portions of the analysis area would depend on natural processes. Rehabilitation in the fire area would be done only where necessary to prevent or correct immediate resource damage. Artificial reforestation would occur only in plantations damaged by the fire. The Bald Eagle Management Area (BEMA) and Pileated Woodpecker Habitat Area (PWHA) would be maintained.
